THE **BUSINESS BACK PACK** RE-INVENTED FOR THE **AGILE WORKER**

HB shuttle

Hotbox Storage ingenuity has transformed the humble backpack into the ultimate agile worktool for the mobile worker or commuting professional. HB-shuttle combines the familiar characteristics of Hotbox Storage, which are to help workers organise, personalise and transport their worktools in the workplace, with a new stylish, comfortable and versatile backpack.

HOT BOX®

If you are one of the increasing number of workers who commute to a variety of agile workplaces, or different customer sites, you will appreciate the freedom and flexibility this working practice brings; however, the downside can be organising and transporting all of your work files, tools and personal things you need in one easy and comfortable container.

HB-shuttle makes this easy with its dynamic dual storage system. The first part of HB-shuttle is the backpack which is stylish and comfortable and has been designed with plenty of room and practical compartments for your work files, phone, keys, passes or perhaps your gym kit or overnight clothes.

The second part of HB-shuttle is the HB-3i insert which provides a secure, convenient and organised location for all your electronic work tools such as your laptop, tablet, mouse, cables, pencil case and the things you need at your workspace.

This dynamic combination of HB-shuttle and HB-3i gives you the ability to transport all of your work and personal things in one easy to use and comfortable container. When you get to your workplace it splits into the backpack and the HB-3i, so that your non-core work or bulky personal items are left safely in the backpack in a locker. Then the HB-3i comes with you to your workstation with all your worktools ready for action.

SPECIFICATIONS
